

UBalt Incubator Demo Day 2026

Speaker Notes — Scott Kaufman, Stacks Data

Slide 1 — Title / Introduction

- Intro: Scott Kaufman, founder & CEO of Stacks Data — supply chain compliance data
 - Paint the picture: you're an ink manufacturer selling to NYTimes, Amazon, Target — every customer needs proof your product is safe, and they all ask the same questions in different formats, through different systems, over and over
-

Slide 2 — The Compliance Data Problem

- We built a platform that worked for manufacturers — they could request compliance data easily
 - But suppliers were still buried in questionnaires — nicer ones, maybe, but the volume of work hadn't changed
-

Slide 3 — What the Accelerator Revealed

- 100% of suppliers left — not because the tech was bad, but because we hadn't made their lives easier
 - Suppliers told us 75% of compliance work is completely redundant — same questions, different formats, dozens of platforms
 - They wanted to know: where's the solution to THEIR problems?
-

Slide 4 — Compliance Data Router

- The solution: suppliers enter data once per product in a centralized cloud document; AI translates and delivers to every customer platform automatically
 - Built in weeks as a solo founder using AI coding agents — what would take a traditional team months
-

Slide 5 — Validation + Go-to-Market

- Omya's compliance director called it "a gold mine" — even after leaving the platform; BASF exploring a dev partnership
 - Every churned supplier said they'd come back if supplier-side experience improves
 - Existing relationships = direct return-to-market pathway
-

Slide 6 — Revenue Model + The Ask

- SaaS subscription: suppliers pay to enter once, deliver everywhere — every user is a potential paying customer
 - The ask: connections in supply chain / logistics / manufacturing, people to spread the word, anyone who wants to follow the journey
 - AI as a multiplier, not a gimmick
-
